## **DETAILED ACTION**

### ***Election/Restrictions***

Applicant's election without traverse of Group I, claims 1-10 in the reply filed on 12/30/2003 is acknowledged.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-7 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Ando et al., U.S. patent No. 5,447,983.

Ando et al., teach the use of a monodisperse aminomethylated bead polymer to perform gas adsorption wherein the bead polymer is prepared as set forth in the instant claims. Ando et al., teach that large sized porous polymer beads having a cross linked degree of from 40 to 80% are effective in gas adsorption for such gases as sulfuric oxide. See column 1, lines 34-37 and column 6, lines 15-60.

### ***Claim Rejections - 35 USC § 103***

Art Unit: 1744

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 8-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ando et al., as applied to claims 1-7 above, and further in view of Funke DE 19830470 (abstract).

Art Unit: 1744

Funke teaches the use of a cross-linked bead polymer in the adsorption of metabolically produced carbon dioxide.

It would have been well within the purview of one of ordinary skill in the art to utilize the bead polymer of Ando et al., in gas adsorption associated with re-breathing, such as respiratory devices, diving equipment and survival systems, because, as taught in Funke, bead polymers are effective in adsorption of respiratory gases, as those are metabolically produced.
